Trimble R10

MODEL 2 GNSS SYSTEM

PURE, UNINTERRUPTED SURVEYING

Collect more accurate data faster and easier, no matter what the job or the environment, with the Trimble® R10 GNSS system.

Trimble 360 Receiver

Powerful Trimble 360 receiver technology in the Trimble R10 supports signals from all existing and planned GNSS constellations and augmentation systems. With the latest and most advanced Trimble GNSS technology, the Trimble R10 offers an unparalleled 672 GNSS channels to future-proof your investment.

The new Trimble R10 also provides improved interference protection to suppress a variety of intentional and unintentional sources of interference, as well as spoofing, for optimal performance in today's increasingly crowded signal frequency spectrum.

Trimble HD-GNSS Processing Engine

The advanced Trimble HD-GNSS processing engine provides markedly reduced convergence times as well as high position and precision reliability while reducing measurement occupation time. Transcending traditional fixed/float techniques, it provides a more accurate assessment of error estimates than traditional GNSS technology.

Trimble SurePoint

With Trimble SurePoint™ technology, an electronic level bubble is displayed on the Trimble controller screen, allowing surveyors to maintain focus where it matters most. Full tilt compensation allows the survey pole to be tilted up to 15° when measuring, allowing the Trimble R10 to capture points that would be inaccessible to other GNSS surveying systems.

Trimble CenterPoint RTX

Trimble CenterPoint® RTX delivers RTK level precision anywhere in the world without the use of a local base station or VRS™ network. Survey using satellite or internet delivered CenterPoint RTX correction services in areas where terrestrial based corrections are not available.

Trimble xFill

Leveraging a worldwide network of Trimble GNSS reference stations and satellite datalinks, Trimble xFill® technology seamlessly fills in for gaps in your RTK or VRS correction stream. Maintain centimeter-level accuracy beyond 5 minutes with a CenterPoint RTX subscription.

Smart, Versatile

The Trimble R10 is a versatile solution, loaded with smart features to support any workflow, all day long:

- Integrated cellular modem to receive VRS corrections or operate as a mobile hotspot
- Wi-Fi to connect to a laptop or smartphone to configure the receiver without a Trimble controller
- Bluetooth to connect to an Android or iOS mobile device running supported apps
- 6 GB internal memory to store raw observations
- Smart lithium-ion battery, with built-in battery status indicator
- Improved power management increases battery life and operating time in the field on average by 33%

Key Features

+++++++++++++++++++

- Advanced satellite tracking with Trimble 360 receiver technology and latest generation Trimble Custom Survey GNSS ASIC with 672 GNSS channels
- Improved protection against sources of interference and spoofed signals
- Support for Android and iOS platforms
- Cutting-edge Trimble HD-GNSS processing engine
- Precise position capture and full tilt compensation with Trimble SurePoint technology
- Trimble CenterPoint RTX provides RTK level precision worldwide without the need for a base station or VRS network
- Trimble xFill technology provides centimeter-level positioning during connection outages
- Sleek ergonomic design for easier handling

Trimble R10 MODEL 2 GNSS SYSTEM

- The current capability in the receivers is based on publicly available information. As such, Trimble cannot
 guarantee that these receivers will be fully compatible with a future generation of Galileo satellites or signals
 Precision and reliability may be subject to anomalies due to multipath, obstructions, satellite geometry, and
- atmospheric conditions. The specifications stated recommend the use of stable mounts in an open sky view.
 EMI and multipath clean environment, optimal GNSS constellation configurations, along with the use of surperactices that are generally accepted for performing the highest-order surveys for the applicable application including occupation times appropriate for baseline length. Baselines longer than 30 km require precise ephemeris and occupations up to 24 hours may be required to achieve the high precision static specification.

 Depends on WAAS/EGNOS system performance.

 Network RTK PPM values are referenced to the closest physical base station.

- 5 May be affected by atmospheric conditions, signal multipath, obstructions and satellite geometry. Initialization reliability is continuously monitored to ensure highest quality.
 6 RMS performance based on repeatable in field measurements. Achievable accuracy and initialization time may vary based on type and capability of receiver and antenna, user's geographic location and atmospheric activity. scintillation levels, GNSS constellation health and availability and level of multipath including obstructions such
- scintillation levels, GNSS constellation health and availability and level of multipath including obstructions such as large trees and buildings.

 7 Accuracies are dependent on GNSS satellite availability. xFill positioning without a Trimble CenterPoint RTX subscription ends after 5 minutes of radio downtime. xFill positioning with a CenterPoint RTX subscription will continue beyond 5 minutes providing the Trimble RTX solution has converged, with typical precisions not exceeding 6 cm horizontal, 14 cm vertical or 3 cm horizontal, 7 cm vertical in Trimble RTX Fast regions. xFill is not available in all regions, check with your local sales representative for more information.

 8 RTK refers to the last reported precision before the correction source was lost and xFill started.

 9 Receiver will operate normally to ~40 °C, internal batteries are rated to ~20 °C.

 10 Tracking GPS, GLONASS and SBAS satellites.

 11 Varies with temperature and wireless data rate. When using a receiver and internal radio in the transmit mode, it is recommended that an external 6 Ah or higher battery is used.

- is recommended that an external 6 Ah or higher battery is used.
- 12 Varies with terrain and operating conditions.
 13 Bluetooth type approvals are country specific

Specifications subject to change without notice.
